

# Mitel Dialer R4.1 B6

## Maintenance build

### Release Notes

To support the **MCH-7245** JIRA issue in the PBX, you need to use **Mitel Dialer R4.1 B6** :

- [MIVCK-6421](#) - Dialer R4.1 & MVO400 - Taking into account CSTAIII extensions to display or not the 'Hold' button in a conference.

**The current GA version for MV5000 is Mitel Dialer R4.1 B4 and the next GA version will be Mitel Dialer R4.1 C1**

For **MVO400**, it should be better to use **R4.1 B6** because four fixes in **B5** & **B6** are specific to **MVO400** :

- [MIVCK-6411](#) - Dialer R4.1 - 'active directory' parameter in aastra.cfg not taken into account.
- [MIVCK-6410](#) - Installation path of the desktop icon shortcut is not correct.
- [MIVCK-5971](#) - Mitel Dialer - wrong info in redial list.
- [MIVCK-6421](#) - Dialer R4.1 & MVO400 - Taking into account CSTAIII extensions to display or not the 'Hold' button in a conference.

There are already two fixes planned for the future **R4.1 C1** that are specific to **MV5000 & softphone mode** : no impact for MVO400
